CDMD-OA SCLSI Overview

Class Objectives/Agenda

Students will learn to:

Log on to CDMD-OA

Build Ad Hoc queries

Create Standard reports

Use CDMD-OA Utilities

Build user Workfiles

Use Help Files

Day 1

- Understand the SCLSI Program, key roles and responsibilities
- Understand Strategic Data Flow and ASI processing
- Understand CDMD-OA functions
- Build Ad Hoc queries, Browse windows and Detail Screens, Help Files, Edit and Screen Option Menus
- Query References, create Standard Reports, use Utilities
- Labs

Day 2

- Review Day 1
- Build user workfiles
(copy, insert and delete configuration, logistics and alteration records)
- Share workfiles, copy queues to Summary and print VALAIDs
- Globally replace data in workfiles
- Import SDIF data into workfiles
- Lab

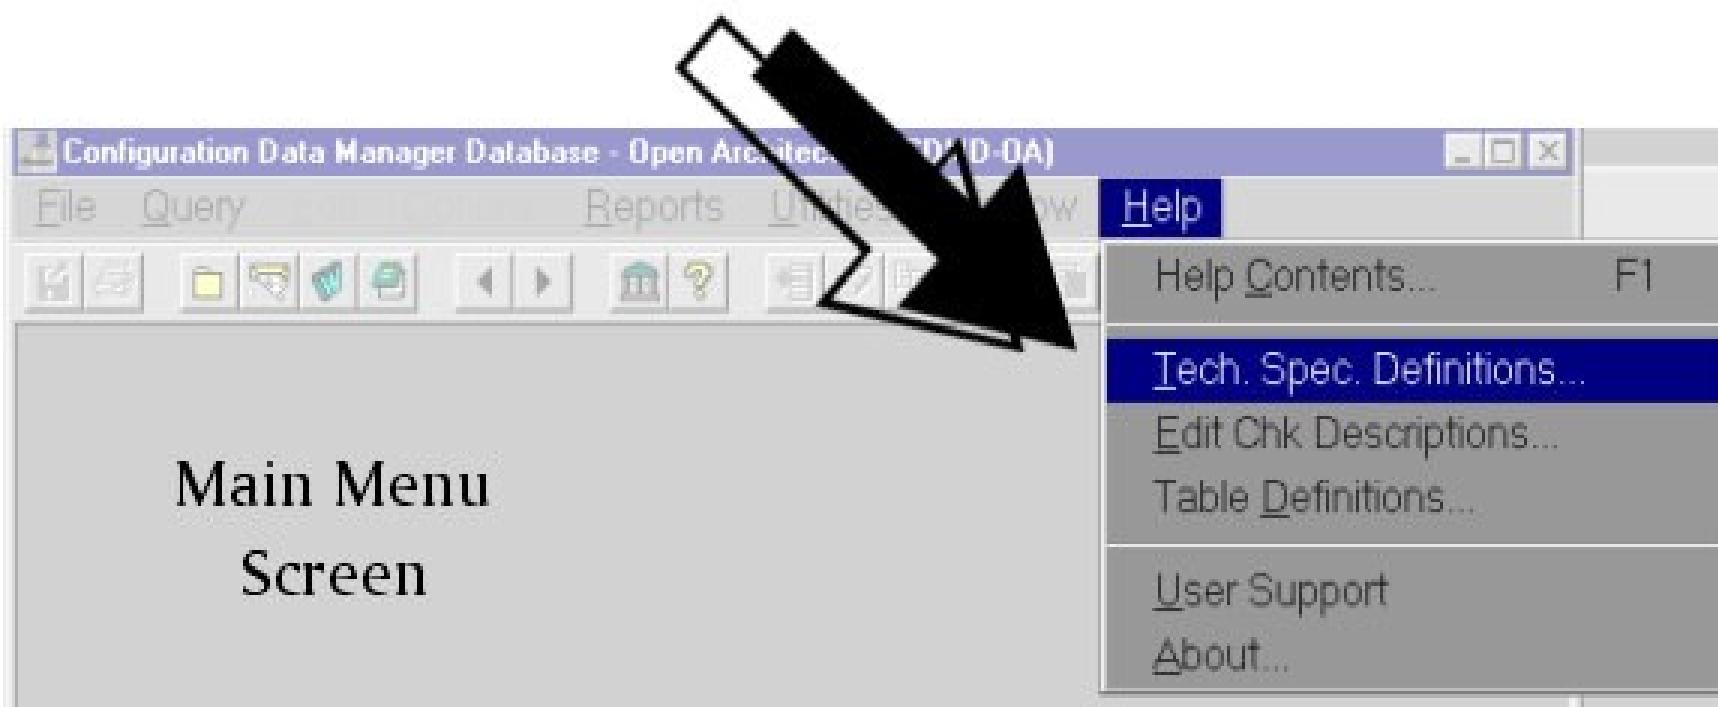

Lesson Objectives

- **Describe SCLSI functionality**
- **Understand the different roles and responsibilities**
- **Comprehend CDMD-OA software structure**

Ship Configuration and Logistics Support Information System

Configuration Status Accounting system developed to improve configuration and logistics management and control processes for Navy ships and selected shore activities.

An online adaptation of the governing document, NAVSEA Technical Specification 9090-700(x) appears as part of the CDMD-OA Help file.

Need for effective Configuration Management

- Improve support: Provide accurate configuration and logistics information
- Cost control: Support actual configuration
- Improve Fleet readiness: Less time on research, more time on training

Need for management system to track all configuration-worthy items

Provides direct support to Fleet Maintenance and Material Readiness

Addresses all configuration-worthy items necessary for operation, maintenance, modernization and support

Recent advancements (OMMS-NG) include software, systems, services, compartments, MAMS - anything that can have a job assigned to it.

Provides for technical data reviews and equipment configuration audits

The SCLSI database IS maintained in the CDMD-OA CENTRAL database

Previously known as the Ship Configuration and Logistics Support Information (SCLSI) database and the Weapons System File Download (WSFD) database.

CDMD-OA CENTRAL is the repository and source data file for ship configuration and associated logistics support information.

Integrated Logistics Overhaul (ILO) Team/ Fleet Technical Support Center Pacific (FTSCPAC)

- Provide logistics support
- Train Fleet personnel
- Provide additional assistance required during Fleet operations.

(New construction not shown)

Ship

- Performs CSMP Upline
- Submits 3M data (2K, CK) via RAD Upline Reporting
- Initiates a Job Control Number which is tracked throughout the ASI Process

ILO (Integrated Logistics Overhaul) performs some of ship's responsibilities during availabilities

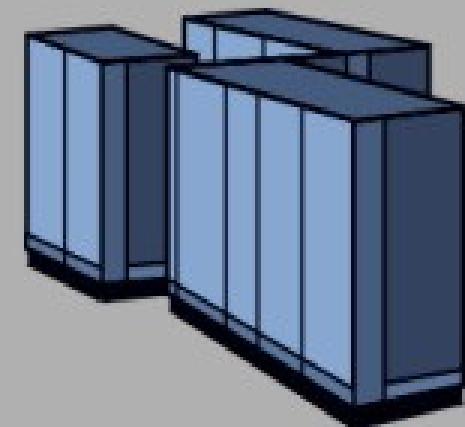

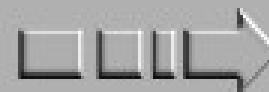

Ship/ILO

TYCOM/
MRMSCDMD-OA
Central

Ship/ILO

TYCOM/MRMS processes the data, converts the data from 80 to 120 character format, combines the CSMP from various UICs, then sends the CSMP file with CKs back to RADLANT.

RAD CSMP Upline Report

Strips off Cks

RADLANT/RADPAC Server

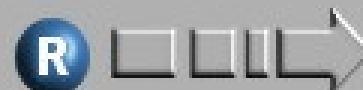

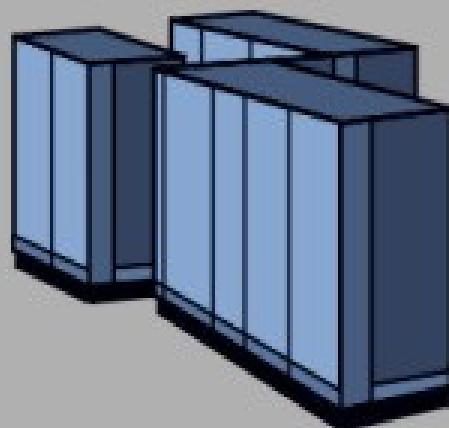

Ship/ILO

TYCOM/
MRMSCDMD-OA
Central

Ship/ILO

TYCOM/MRMS processes the data, converts the data from 80 to 120 character format, combines the CSMP from various UICs, then sends the CSMP file with CKs back to RADLANT.

RADLANT then forwards the CSMP file to both Central and the Ship's 3M System for material history.

RADLANT/RADPAC Server

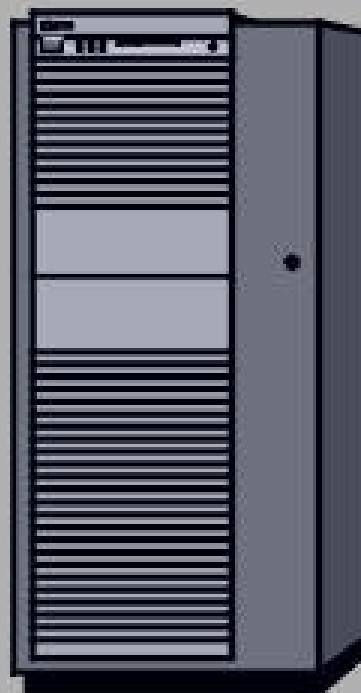

CDMD-OA Central and Ship's 3M System

Ship/ILO

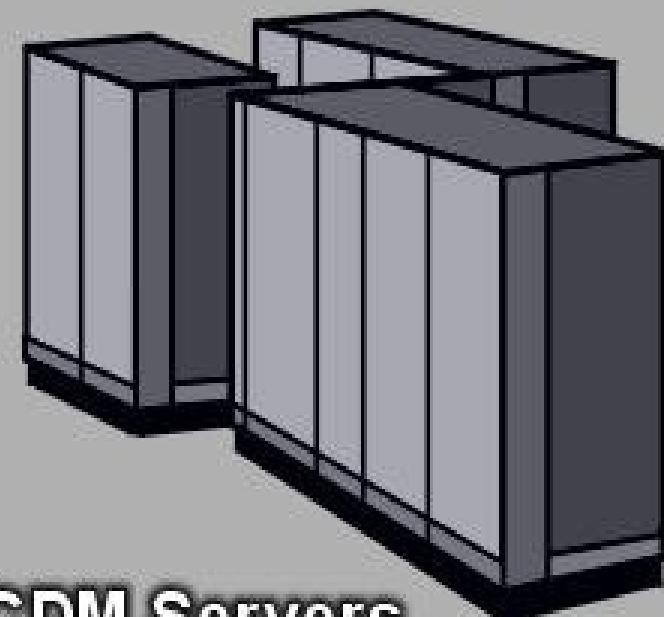

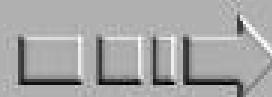

TYCOM/
MRMSCDMD-OA
Central

Ship/ILO

CDMD-OA Central forwards the CKs to the appropriate CDM's server, where they are processed by the assigned CDM.

Central

CDM Servers

Ad Hoc query

- 1) Go to the Configuration (2) query screen and **REMOVE ALL**
- 2) **Add** the following fields:
 - **Ship Hull** (ACT) - *From the Activity (ref) Table*
 - **RIN, RIC, HSC, SERIAL NUMBER, LOCATION, ISC** - *From the Config (Primary) Table*
 - **EFD, ESD** (ref-CFF) *From the Class Functional File Reference Table*
- 3) **Move** the following fields:
 - ESD under HSC
 - EFD under ESD
- 4) Using **HELP**, what is **EFD**, **ESD**, and **ISC**
- 5) **Save** the ad hoc query as your last name.
- 6) Right mouse click and bring up additional options. View all options.

Browse Screen

- 1) Go to the Configuration (2) query screen and **REMOVE ALL**
- 2) Add The following fields
 - **Ship Hull** (ACT)
 - **RIN, RIC, HSC, SERIAL NUMBER, LOCATION, ISC**
 - **EFD,ESD** (ref-CFF)
- 3) **Set** the **Ship Hull** FILTER to DDG 68
- 4) Type RIC **00002100** in the **RIC** FILTER and Click **OK**.
- 5) **SORT** on LOCATION.
- 6) **MOVE** ESD between RIC and HSC.
- 7) **INCREASE** EFD field to read complete EFD.
- 8) **DECREASE** Serial Number field.
- 9) Go through steps to **SAVE** as an Excel file with headers.
- 10) Right Click and bring up Help Popup and Help Detail windows.

Detail Screen

- 1) Go to the Configuration (2) query screen and **REMOVE ALL**
- 2) Add The following fields
 - **Ship Hull** (ACT)
 - **RIN, RIC, HSC, SERIAL NUMBER, LOCATION, ISC**
 - **EFD,ESD** (ref-CFF)
- 3) **Set** the **Ship Hull** FILTER to DDG 68
- 4) Type RIC **00004804** in the RIC FILTER and Click **OK**.
- 5) Click **Detail** button.
- 6) Double-click on each Hot Key field (RIC, HSC, Parent RIC)
- 7) Click on ISC field, then click on Reference Library Icon, then click on the ? Icon.
- 8) Click on DOVC field, then click on Utilities. From the drop-down menu, click Ref Library.
- 9) Does the record have any Logistics, Alteration, Parts, Source of Support, UDFs, or JCN records?

Review Building Queries

- Lab 1, Appendix D

Review 3-Step Query Process

- Selection Criteria Screen
- Browse Screen
- Detail Screen

Review Reference Files (Lesson 9)

Review Help Menu (Lesson 14)

Review Wildcards (Appendix A)

Review Technical Support

WorkFile Summary Screen

- Each Row Reflects a Summary at the Load File Level or User WorkFile Level
- Status - Open, Build, Hold, Released, Completed, and Sent to CDM
- Insert/delete/submit new work files
- Users rights, access and submit workfiles

WorkQueue Screen

- Each Row Reflects a Summary at the UIC/Hull Level
- Each Workfile Summary May Contain Multiple Queues (Hulls)
- Insert/delete Work queues here
- Copy Queue to workfile summary

Manual Review

- Provides a Brief of Each Transaction within the Queue
- Can View Transactions Using Various Filters

Detail Screen

- Detail Screen of Each Transaction colors

Creating Workfiles

- Easier to copy data into a workfile than to create from inserting records
- View workfile from Workfile Summary Screen
- Default Summary Title on Status Bar

To create a workfile:

1. Open the **Query** menu and click **Configuration (2) File**.
2. At the **Selection Criteria** window, select the fields you want displayed.
3. In the Browse window, select the records to copy.
4. Open the **Edit** menu and click **Copy to Queue**.

Note: The **Copy to Queue** command copies records to a workfile.

From the **WF Summary Selection** window, select the workfile to which you want to copy the records and click **OK**.

OR

From the **WF Summary Selection** window, click **Add New** to add a new workfile and type a descriptive title in the **Enter Summary Title** text box.

Note: The text typed in the **Enter Summary Title** text box becomes the workfile's title.

In the **Copy Selection Criteria** dialog box, select **Copy to same UIC** if you want to copy records to the same ship (CDMD-OA assigns existing RINs) or **Copy to One or Multiple UICs** (CDMD-OA assigns TRINs).

Select the information to copy, i.e., Logistics (RT 3), Alterations (RT 4), and/or User Defined Fields (UDFs) and click **OK**.

If you selected **Copy to One or Multiple UICs**, the **Select Hull(s)** window appears allowing you to select the appropriate hulls. After selecting hulls, click **OK**.
